

Responsible insurance in corporate business

Wien, May 2021

Taking responsibility in the long term and thinking in generations are core aspects of insurance. VIG relies on forward-looking management and profitable growth in order to remain a reliable partner for its customers in the future. At the same time, an intact social and ecological environment are also necessary for economic success. The aim is to create economic value today without doing so at the expense of tomorrow. Sustainability is therefore being integrated even more explicitly in the core business. The provision

of insurance cover in corporate business plays a key role in this. In this context, the Group's own consulting firm Risk Consult also evaluates environmental risks and customers' exposure to natural catastrophes. Measures are developed and implemented together with the respective companies.

The current self-imposed commitments for responsible insurance in corporate business in the area of climate are presented below.

Thermal coal

VIG's coal sector underwriting policy is guided by the national energy strategy of the respective country where VIG companies are operating.

1. Underwriting policy in countries with an existing coal energy exit strategy

- Since May 2019 no insurance of any new coal mining or coal power plant construction project has been provided.
- Phasing out (no renewal) of existing risk insurance of
 - coal mines
 - coal plants or
 - energy sector companies which
 - generate more than 30% share of sales from thermal coal mining and/or
 - produce yearly more than 20 million tonnes of thermal coal and/or
 - generate more than 30% of their total power generation from thermal coal and/or
 - generate yearly more than 10 gigawatt hours out of thermal coal.

2. Underwriting policy in countries without an existing coal energy exit strategy

- Since May 2019 no insurance of any new coal mining or coal power plant construction project has been provided.
- There is a commitment to pursue a consistently declining underwriting strategy of existing risk insurance. VIG companies will specifically not increase their engagement or setting activities in insurance cover for coal risks or coal construction projects as a result of the exit strategies of competitors.

- For countries where the economy and employment depend significantly on the coal sector, the insurance of coal risks might be maintained in exceptional cases subject to:
 - the obligation to manage transition risks to be fully compliant with European regulations (e.g. to secure a stable and coordinated transition to a low carbon energy supply as a protection of the society),
 - local management's approval,
 - be fully compliant with applicable legal emission standards; implementation of measures to reduce environmental impacts and activities to protect the community and citizens,
 - and the policy holder presenting a credible plan for exiting coal-fired generation with a just transition plan. Just transition risks specifically relate to steps taken to support employees/regions which are significantly affected by the transition from a CO₂-intensive to a low-emission economy (e.g. retraining programs). VIG is guided by the market standards what is considered a credible exit plan. If no credible exit plan can be presented, the insurance contract must be terminated as soon as possible. This also applies to the reinsurance business, where we can directly influence the conditions as the leading reinsurer.

Existing contracts can only be retained if all of the above apply.

- Local underwriting policies shall be adjusted to comply with any material changes of the national energy supply strategy.

3. Validity and Application

These requirements have been in effect since May 2021 and are mandatory for all VIG insurance companies.
